

CIRCULAR CITIES

PROMOTING SUSTAINABLE INNOVATION IN URBAN SYSTEMS AND SERVICES WITHIN THE ENERGY-FOOD-WATER-CLIMATE NEXUS

These days, cities are at the center of the sustainability agenda. Current economic and urbanization trends place significant pressure on urban resources, systems and infrastructures, and demand for novel approaches in governing, financing and monitoring urban performances. In this perspective, cities are laboratories where innovative approaches can be tested and the energy-food-water-climate nexus can be implemented with a circular perspective. IEFE Bocconi - GEO - green economy observatory – in collaboration with the European Commission and UN SDSN – Sustainable Development Solutions Network - Cities, organized this conference with the aim of defining the state of the art on circular cities and exploring innovative approaches for implementing the circular economy agenda at the urban level, in collaboration with key European and national stakeholders. This event refers to IEFE Bocconi's ongoing research programs on circular economy and on sustainable, low carbon and smart cities. The conference is part of the Sustainable Energy Week organized by the City of Milan.

12 MARCH 2018

9:00AM

Bocconi University
Aula Manfredini
via Sarfatti 25, Milano
